Al Catalytic Converters

Features and Benefits

The following features and benefits apply to both C.A.R.B. and FED

- Al carries the most technologically advanced direct fit catalytic converter in the aftermarket
 - Our proprietary catalyst loading and washcoat formulation is engineered to keep the check engine light off for the exact application it is cataloged for
 - Our direct fit catalytic converters have a direct fit catalyst
- Precision robotic welding at seams
- Firmly attached heat shield that won't rattle
- 409 Stainless steel construction on pipes, hangers, flanges and shell
- Our direct fit parts use forged flanges or rolled flanges depending on application
- O2 sensors are in factory correct locations
 - The sensor sits in exhaust stream for best reading
- Our direct fit parts use braided double-walled interlocking flex pipe
- Our interlocking double-walled design is the most durable in the industry. It won't break, won't whistle, and it is stainless so it won't rust.
- Each converter is PSI-tested for leaks
- Separate assemblers, welders and quality control personnel ensure that the parts are put together correctly, welded perfectly and checked for defects
- Welders focus on skilled welds, assemblers focus on putting the parts in the jig correctly, and quality control inspects parts against the jig and master sample
- Gaskets included

Product Coverage

- 100's of passenger car and light truck applications available, foreign and domestic makes/models

Warranty

- Aftermarket C.A.R.B. compliant catalytic converters are required to carry a 5 year / 50,000 mile warranty (providing the vehicle is running properly) while EPA-compliant aftermarket catalytic converters are required to carry a 2 year / 25,000 mile warranty with the same running requirements
