AI VSU Shocks® and VSU Struts®

Features and Benefits

- Twin tube design offers restored ride quality and handling
- Multi-shim valve system is “vehicle specific” for superior-handling ride control and comfort as opposed to the less expensive “on-off” valve used by most shock companies for decades
- Piston rod is hardened, micro-polished and then double chrome-plated for durability
- Twin tube design provides an outer tube to protect the working components from damage. Tubes are made of cold drawn extruded steel.

***VSU STRUTS® AND
VSU SHOCKS®***

Product Coverage

- 888 Unique SKUs available
- Full range that covers domestic, Asian and European manufacturers

Warranty

- Limited lifetime
