

AUTOPART INTERNATIONAL PREMIUM E-COATED BRAKE ROTOR

When replacing the rotors in the brake system, more and more Professional Service Providers are looking for premium brake rotors that have the same attributes as the original rotor to service their customer. Autopart International's Premium E-Coated Brake Rotor allows you to keep the appearance and performance of the original rotor. These premium brake rotors are made from OE core design.

AI's Premium Rotors are 100% fully machined and mill-balanced providing a smooth, confident application of braking force. The quality features include double disc ground finish; a non-directional friction surface area provides an effective pad-rotor break in with tight quality tolerances (DTV-Disc Thickness Variation and LRO-Lateral Run Out). Premium E-coating provides long lasting corrosion protection and exceptional performance with our sharp silver finish.

Autopart International offers +300 parts covering open wheel design for many late model European and Asian applications as well as sports car, SUV and truck applications.

To learn more about AI's Premium E-Coated Brake Rotors, contact your local AI store for details.
