100% NEW STARTERS & ALTERNATORS

## WHEN DO STARTERS AND ALTERNATORS NEED REPLACEMENT?

There are many reasons to replace a worn starter or alternator. The most common reason is because wiring or a weak battery is at fault. Starters and alternators are designed to last the lifetime of the vehicle as long as a vehicle charging system is maintained. The life expectancy can be shorter due to neglect of the charging system, not checking the water level in the battery, not inspecting the battery terminal ends for corrosion, or not checking the that body grounds are good, clean and tight. All of these will contribute to a failure of the unit. When looking to replace these parts, Professional Service Providers are looking for top quality units that will last.

They want premium units that contain new components and a lifetime warranty. Autopart International's OEF3 products are 100% new units built with premium components. They are manufactured to meet or exceed OEM and are 100% computerized load-tested prior to shipment. They offer a lifetime warranty for the Professional Service Provider's peace of mind.
