SUPERIOR AND SILENT BRAKING PERFORMANCE

Autopart International's Severe Duty Brake Pads have been specially engineered to provide superior and silent braking performance under the most extreme driving conditions. Formulated to withstand extreme temperatures and load, the friction material is mechanically attached to the backing plate to provide exceptional shear strength. Post-cured baking process provides confident pedal feel from the initial stop and consistent brake pad performance. This also reduces fade under aggressive use.

Severe duty brake pads include OE style abutment hardware, slots, chamfering and shims, which aid in reducing noise, vibration and harshness. They are 100% copper and asbestos free and manufactured in North America at an ISO: 9000 factory.

To learn more about AI's Severe Duty Brake Pads, contact your local Autopart International store for details.
