

Pro-STRUT™

EFFECTIVELY RESTORE ORIGINAL RIDE FEEL

When the time comes to replace worn struts on your customer's vehicle, there are many options on the market. Most Professionals are opting for complete strut assemblies. These assemblies are made from 100% new components. The strut, strut mount, coil spring, boot, bump stop, and mounting hardware are all included.

The main reason service professionals are choosing complete strut assemblies is the advantage in installation time. Quicker service bay turnaround is valuable to the shop owner, as well as the vehicle's owner.

Complete strut assemblies also allow the shop to have a lesser experienced technician perform the repair. No need to use a dangerous spring compressor.

Replacing the complete assembly allows worn components such as the strut mount and coil spring to be upgraded as well. Pro-STRUTS are a complete strut assembly and are a great solution to restore a customer's vehicle to like new ride feel.
