**100% NEW STARTERS  
& ALTERNATORS**

## **REPLACING WORN STARTERS OR ALTERNATORS**

There are many reasons to replace a worn starter or alternator. The most common reasons being wiring or a weak battery. Starters and alternators are designed to last the lifetime of the vehicle, as long as the vehicle charging system is maintained. The life expectancy can be shortened due to neglect of the charging system, insufficient water levels in the battery, corroded battery terminal ends, or body grounds that are not good, clean and tight. All of these will contribute to the failure of a unit.

When replacing these parts, Professional Service Providers are looking for top quality units that will last. They want premium units that contain new components and have a lifetime warranty. Autopart International's OEF<sup>3</sup> products are 100% new units built with premium components. They are manufactured to meet or exceed OEM units and are 100% computerized load-tested prior to shipment. They offer a lifetime warranty for the professional installer's peace of mind.

To learn more about AI's OEF<sup>3</sup> product line, contact your local Autopart International store for details.
